

11

27. A portable electronic device comprising:

a body having a display;

a first lid slideably connected to the body, the first lid
including a keyboard on an outer portion of the lid; and

a second lid on a same plane as the first lid, slideably
connected to the body, the first lid and second lid

12

adapted to simultaneously move across at least a portion of the display, wherein a movement of the first lid and the second lid will expose or obscure the portion of the display, the display being useable in both an exposed and obscured configuration.
